1. Introduction

The Quarterly Labour Force Survey (QLFS) is a household-based sample survey conducted by Statistics South Africa (Stats SA). It collects data on the labour market activities of individuals aged 15 years and above who live in South Africa. However, this report only covers labour market activities of persons aged 15 to 64 years.

This report presents the key findings of the QLFS conducted from April to June 2012 (Q2:2012).

2. Highlights of the results

Table A: Key labour market indicators

	Apr–Jun 2011	Jan–Mar 2012	Apr–Jun 2012	Qtr-to-qtr change	Year-on-year change	Qtr-to-qtr change	Year-on-year change
	Thousand			Per cent			
Population 15–64 yrs	32 435	32 786	32 903	117	468	0,4	1,4
Labour force	17 663	17 948	17 916	-32	253	-0,2	1,4
Employed	13 125	13 422	13 447	25	322	0,2	2,5
Formal sector (non-agricultural)	9 198	9 509	9 571	62	373	0,7	4,1
Informal sector (non-agricultural)	2 213	2 106	2 085	-21	-128	-1,0	-5,8
Agriculture	598	656	638	-18	40	-2,7	6,7
Private households	1 117	1 151	1 153	2	36	0,2	3,2
Unemployed	4 538	4 526	4 470	-56	-68	-1,2	-1,5
Not economically active	14 772	14 838	14 987	149	215	1,0	1,5
Discouraged work-seekers	2 207	2 335	2 311	-24	104	-1,0	4,7
Other (not economically active)	12 566	12 503	12 675	172	109	1,4	0,9
Rates (%)							
Unemployment rate	25,7	25,2	24,9	-0,3	-0,8		
Employed/population ratio (absorption)	40,5	40,9	40,9	0,0	0,4		
Labour force participation rate	54,5	54,7	54,5	-0,2	0,0		

Due to rounding, numbers do not necessarily add up to totals.

The labour force decreased by 32 000 persons between Q1:2012 and Q2:2012. This decrease was reflected in a decrease in the number of unemployed persons, which saw the unemployment rate decline by 0,3 of a percentage point from 25,2% to 24,9% in the Q2:2012. The number of employed persons increased by 25 000 persons. The economy has created 472 000 jobs since the lowest point in employment in Q3:2010.

Behind the increase in employment was an increase in formal sector employment of 62 000. Employment in the informal sector decreased by 21 000, following declines of 28 000 on a quarterly basis in the previous quarter, while Agriculture declined by 18 000, reversing gains of 26 000 in Q1:2012. Private households employment increased by a marginal 2 000 (0,2 of a percentage point) in Q2:2012. The number of discouraged work-seekers declined by 24 000 between Q1:2012 and Q2:2012, while other not economically active persons increased by 172 000, a large rise in the number of persons who have left the labour force.

Compared to a year ago, in Q2:2012, employment increased by 2,5% (322 000), unemployment decreased by 1,5% (68 000), the number of discouraged work-seekers increased by 4,7% (104 000) and other (not economically active) increased by 0,9% (109 000), resulting in a net increase of 215 000 among the not economically.

3. Employment

Figure 1: Total employment, quarter 1:2008 to quarter 2:2012

A trend analysis, since 2008, finds a rise in employment during the fourth quarter of every year, followed by a decline in the subsequent quarter. Since Q3:2010, employment levels have steadily risen from 12,9 million to 13,4 million in Q2 2012, increasing on a quarterly basis, with the exception of the first quarter in 2011 and 2012. A fact ascribed to seasonal factors.

Figure 2: Quarter-to-quarter change in employment, quarter 1:2008 to quarter 2:2012

Figure 2 shows that after three successive quarters of increases in employment, employment declined by 75 000 in Q1:2012. This is not surprising as it has always been the case that employment decreases in the first quarter of each year. In Q2:2012 the number of employed persons rose by 25 000 on a quarterly basis.

Figure 3: Year-on-year change in employment, quarter 1:2008 to quarter 2:2012

South Africa has experienced solid employment growth over the past year, with employment growing by 322 000 (or 2,5%), following growth of 304 000 (or 2,3%) in the year ended March 2012. Employment grew for six consecutive quarters year-on-year since Q1:2011.

Table B: Employment by industry

Industry	Apr–Jun 2011	Jan–Mar 2012	Apr–Jun 2012	Qtr-to-qtr change	Year-on-year change	Qtr-to-qtr change	Year-on-year change
	Thousand			Per cent			
Total*	13 125	13 422	13 447	25	322	0,2	2,5
Agriculture	598	656	638	-18	40	-2,7	6,7
Mining [#]	282	336	357	21	75	6,3	26,6
Manufacturing	1 735	1 722	1 678	-44	-57	-2,6	-3,3
Utilities	93	91	98	7	5	7,7	5,4
Construction	1 043	986	1 012	26	-31	2,6	-3,0
Trade	2 944	3 057	2 966	-91	22	-3,0	0,7
Transport	777	783	791	8	14	1,0	1,8
Finance and other business services	1 704	1 741	1 737	-4	33	-0,2	1,9
Community and social services	2 831	2 891	3 012	121	181	4,2	6,4
Private households	1 117	1 151	1 153	2	36	0,2	3,2

Note: Total includes other industry.

[#]Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample.

For more robust mining estimates, please use the Quarterly Employment Statistics (QES).

*Due to rounding, numbers do not necessarily add up to totals.

Table B indicates that between Q1:2012 and Q2:2012, the increase in total employment was mainly driven by the increase in the number of employed persons in the Community and social services (121 000), Construction (26 000) and Mining (21 000) industries, while employment losses were observed in Trade (91 000), Manufacturing (44 000) and Agriculture (18 000). Job losses in the Manufacturing sector continues, as 67 000 jobs were lost in Q1:2012, while job losses in the trade sector also accelerated from 3 000 jobs lost in the first quarter of this year. The Agricultural sector reversed job gains of 26 000 in Q1:2012. Both the Community and social services and Construction industries reflected employment gains.

Compared to the same period last year, employment increased by 322 000 jobs, with Community and social services, Mining and Agriculture, contributing 181 000, 75 000 and 40 000 jobs respectively. Job

losses were observed in Manufacturing and Construction industries, as employment declined by 57 000 and 31 000 respectively in these industries between Q2:2011 and Q2:2012.

Table C: Employment by province

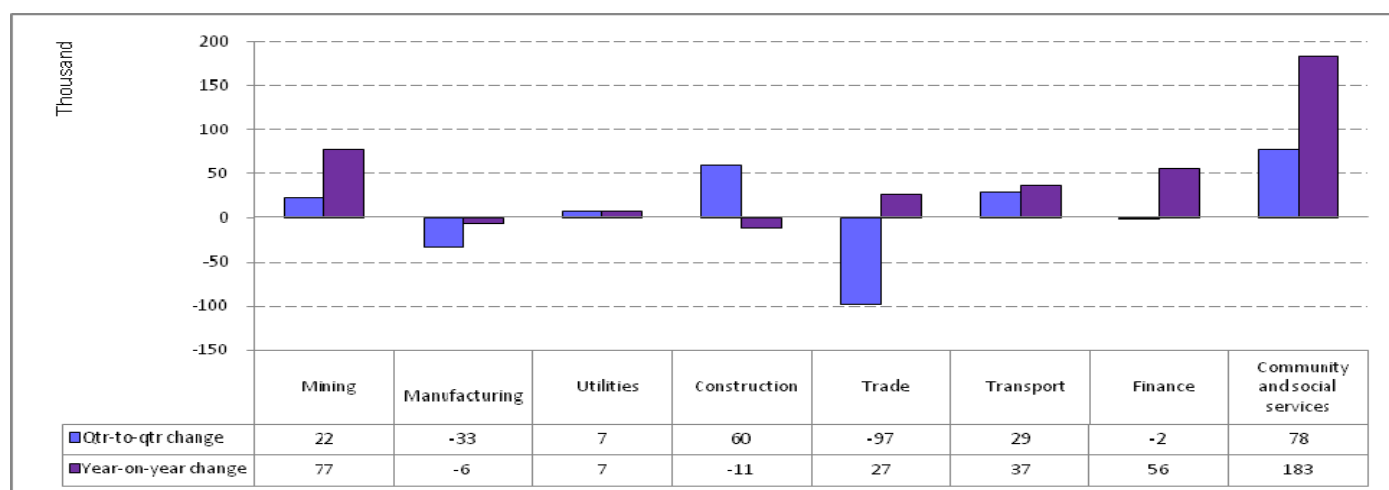

Province	Apr–Jun 2011	Jan–Mar 2012	Apr–Jun 2012	Qtr-to-qtr change	Year-on-year change	Qtr-to-qtr change	Year-on-year change
	Thousand				Per cent		
South Africa	13 125	13 422	13 447	25	322	0,2	2,5
Western Cape	1 805	1 847	1 815	-32	10	-1,7	0,6
Eastern Cape	1 309	1 279	1 298	19	-11	1,5	-0,8
Northern Cape	264	286	281	-5	17	-1,7	6,4
Free State	772	737	728	-9	-44	-1,2	-5,7
KwaZulu-Natal	2 500	2 519	2 520	1	20	0,0	0,8
North West	691	704	709	5	18	0,7	2,6
Gauteng	3 965	4 140	4 125	-15	160	-0,4	4,0
Mpumalanga	884	913	953	40	69	4,4	7,8
Limpopo	936	996	1 018	22	82	2,2	8,8

*Due to rounding, numbers do not necessarily add up to totals.

Table C shows that between Q1:2012 and Q2:2012, employment gains in five of the nine provinces, with the highest increases observed in Mpumalanga (40 000), Limpopo (22 000) and Eastern Cape (19 000). There were job losses in Western Cape (32 000), Gauteng (15 000) and Free State (9 000) over the same period.

For the year ended June 2012, employment increased in seven of the nine provinces, with Gauteng (160 000), Limpopo (82 000) and Mpumalanga (69 000) being the biggest contributors, while employment declined in Free State (44 000) and Eastern Cape (11 000).

Figure 4: Changes in the formal sector employment by industry

*Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample. For more robust mining estimates please use the Quarterly Employment Statistics (QES)

In Q2:2012, formal sector employment accounted for 71,2% of total employment, an increase of 0,3 of a percentage point from the previous quarter, as employment in the sector expanded by 62 000. Between Q1:2012 and Q2:2012 the majority of formal sector job gains were in the Community and social services (78 000), Construction (60 000) and Transport (29 000) industries. Job losses were observed in Trade (97 000) and Manufacturing (33 000) industries over the same period.

Compared to the same period last year, employment gains were recorded in six of the eight industries, in particular the Community and social services (183 000), Mining (77 000) and Finance and other business services (56 000) industries.

Figure 5: Quarter-to-quarter changes in the formal sector employment

Following two consecutive quarters of employment gains, the formal sector shed 107 000 jobs in Q1:2012, however the number of employed persons in the formal sector increased by 62 000 in Q2:2012.

Figure 6: Year-on-year changes in the formal sector employment

The annual change in the number of persons employed in the formal sector has been rising since Q1:2011. Compared to Q2:2011, the formal sector created 373 000 jobs in Q2:2012. This increase is larger than the increase observed in the preceding year.

Figure 7: Changes in the informal sector employment by industry

#Mining is a very clustered industry, hence the industry might not have been adequately captured by the QLFS sample. For more robust mining estimates please use the Quarterly Employment Statistics (QES)

Informal sector employment contracted by 21 000 jobs between Q1:2012 and Q2:2012. Figure 7 indicates that most informal sector jobs were lost in Construction (36 000), Transport (21 000) and Manufacturing (11 000). However, informal sector employment increased by 43 000 in the Community and social services industry quarter-on-quarter.

Compared to Q2:2011, the informal sector lost 128 000 jobs in Q2:2012. All industries experienced job losses with Manufacturing (51 000), Transport (23 000), Finance and other business services (23 000) and Construction (22 000) being the hardest hit with job losses.

Figure 8: Quarter-to-quarter changes in the informal sector employment

Informal sector employment on a quarterly basis declined for four successive quarters since Q3:2011. Compared to Q1:2012, the informal sector lost 21 000 jobs (or 1,0 %) in Q2:2012.

Figure 9: Year-on-year changes in the informal sector employment

Following five successive periods of year-on-year growth since Q2:2010, employment in the informal sector contracted for four successive quarters over the period Q3:2011 to Q2:2012.

Table D: Employment by occupation

Occupation	Apr–Jun 2011	Jan–Mar 2012	Apr–Jun 2012	Qtr-to-qtr change	Year-on-year change	Qtr-to-qtr change	Year-on-year change
	Thousand			Per cent			
Total	13 125	13 422	13 447	25	322	0,2	2,5
Manager	1 124	1 102	1 062	-40	-62	-3,6	-5,5
Professional	762	747	816	69	54	9,2	7,1
Technician	1 469	1 532	1 577	45	108	2,9	7,4
Clerk	1 358	1 419	1 406	-13	48	-0,9	3,5
Sales and services	1 944	1 969	1 956	-13	12	-0,7	0,6
Skilled agriculture	71	61	67	6	-4	9,8	-5,6
Craft and related trade	1 576	1 605	1 581	-24	5	-1,5	0,3
Plant and machine operator	1 121	1 106	1 111	5	-10	0,5	-0,9
Elementary	2 824	2 983	2 957	-26	133	-0,9	4,7
Domestic worker	876	896	913	17	37	1,9	4,2

*Due to rounding, numbers do not necessarily add up to totals.

Elementary occupations account for 22,0% of total employment. While accounting for the biggest share in total employment, the number of persons employed in Elementary occupations declined by 26 000 on a quarterly basis in Q2:2012 compared to Q1:2012. The biggest decline in employment by occupational category was observed for Managers (-40 000), followed by Elementary (26 000) and Craft and related trade (24 000) occupations. Employment for Clerks and Sales and service occupations declined by 13 000 each.

In the same period, employment gains were observed in some occupations with the main contributors being Professional (69 000), Technician (45 000) and Domestic worker (17 000) occupations.

Compared to a year ago, most jobs were created in Elementary (133 000), Technician (108 000) and Professional (54 000) occupations. There was a decline in the number of persons employed in Managerial (62 000) and Plant and machine operator (10 000) occupations.

Figure 10: Employee access to selected leave benefits

Between Q1:2012 and Q2:2012, the proportion of employees with access to selected benefits declined. Entitlement to paid sick leave benefit was the most available benefit offered by employers, with paid sick leave available to 69,0% of employees in Q2:2012, a 0,3 percentage point decline from the previous quarter. The proportion of employees with paid annual (vacation) leave declined marginally from 66,7% in Q1:2012 to 66,3% in Q2:2012; while the maternity/paternity leave benefit declined by 0,6 of a percentage point.

Compared to the same quarter in 2011, the proportion of employees with paid sick leave benefit increased by 2,2 percentage points to 69,0%; there was a 1,6 percentage points increase in the proportion of employees with maternity/paternity leave and an increase of 1,0 percentage points for the paid annual leave benefit.

Figure 11: Employee access to other benefits

More than half of employees indicated that their employers paid Unemployment Insurance Fund (UIF) contributions on their behalf, while about a third of employees were entitled to medical aid benefits from their employers. Between Q1:2012 and Q2:2012, there was a decrease of 0,7 of a percentage point in the proportion of employees for whom their employers paid UIF, while medical aid benefit coverage increased by 0,7 of a percentage point.

However, compared to a year ago, there was a slight improvement in the proportion of employees whose employers paid medical aid benefit for them (up by 1,7 percentage points), while the UIF benefit remained virtually unchanged.

Figure 12: Nature of employment contract or agreement , quarter 1:2008 to quarter 2:2012

Since Q1:2008, more than 60,0% of the employees had a permanent contract/agreement with their employer, while more than 11,0% had a contract of a limited duration with their employer. Between Q1:2008 and Q2:2012, there has been an increase of 2,3 percentage points in both the proportion of employees with a permanent contract/agreement with their employer and in the proportion that had a limited duration contract with their employer.

Figure 13: How annual salary increment is negotiated

Annual wage negotiations are currently underway in a number of industries, most notably the public service. In Q2:2012, approximately 48,9% of employees indicated that their annual salary increases are determined by the employer only, 24,0% by the union and the employer. While 9,5% of the employees reported that their annual salary increase is determined by the bargaining council or other sector bargaining arrangement, only 5,4% of employees did not have regular annual increases.

4. The unemployed population

Figure 14: Total unemployment, quarter 1:2008 to quarter 2:2012

In Q4:2008, there were approximately 3,9 million persons unemployed in South Africa. In the wake of the financial and economic crisis, the level of unemployment climbed rapidly, reaching a peak of 4,4 million in Q2:2010, and remaining around this level in the following quarter. The number of unemployed persons rose to 4,5 million in Q1:2012, but declined by 56 000 persons between Q1:2012 and Q2:2012.

Table E: The unemployed by sex

Unemployed	Apr–Jun 2011	Jan–Mar 2012	Apr–Jun 2012	Qtr-to-qtr change	Year-on-year change	Qtr-to-qtr change	Year-on-year change
	Thousand			Per cent			
Total*	4 538	4 526	4 470	-56	-68	-1,2	-1,5
Women	2 301	2 265	2 227	-38	-74	-1,7	-3,2
Men	2 237	2 261	2 243	-18	6	-0,8	0,3

*Due to rounding, numbers do not necessarily add up to totals.

Unemployment decreased by 56 000 (or 1,2%) persons between Q1:2012 and Q2:2012. This decline reflected a drop in both the number of unemployed women (38 000) and unemployed men (18 000).

Year-on-year, the number of unemployed women decreased by 74 000 (or 3,2%), while there was virtually no change in the number of unemployed men (a slight increase of 6 000).

Figure 15: Unemployment rate by sex

The unemployment rate for women was 27,1% in Q1:2008, while the rate for men was 6,6 percentage points lower, and by Q1:2012 this gap had narrowed to 4,6 percentage points.

Unemployment rate for women remained higher than the national average between Q1:2008 and Q2:2012, and by Q2:2012 the gap between the two had narrowed between 1,0% to 2,6%. Q2:2012 saw a slight decrease in the unemployment rate for both men and women compared to Q1:2012. The overall decline in the unemployment rate indicates improvements in the labour market environment, which enabled more persons to take active steps to look for work.

Figure 16: Share of the unemployed by education level

In general, lower unemployment rates are associated with higher levels of education. In Q1:2008, about 64% of the unemployed did not have matric, while only 5,2% of the unemployed had tertiary qualifications. In Q2:2012, approximately 59,3% of the unemployed did not have matric and only 6,3% had tertiary qualifications.

Figure 17: Unemployment rate by province

Figure 17 shows a decrease in the unemployment rate in four of the nine provinces in Q2:2012 compared to Q1:2012. The biggest decrease in the unemployment rate was observed in Limpopo (1,7 percentage points), Mpumalanga (1,4 percentage points) and KwaZulu-Natal (0,7 of a percentage point). The biggest increase in unemployment rate was recorded in Northern Cape (5,0 percentage points).

In comparison to the same period last year, the unemployment rate decreased by 0,8 of a percentage point at the national level. The biggest decreases in the unemployment rate were observed in Gauteng (2,8 percentage points), Mpumalanga (1,5 percentage points) and North West (1,1 percentage points). The biggest increases in unemployment rate was recorded in Free State (4,7 percentage points) in the same period.

Figure 18: Unemployment rate by population group

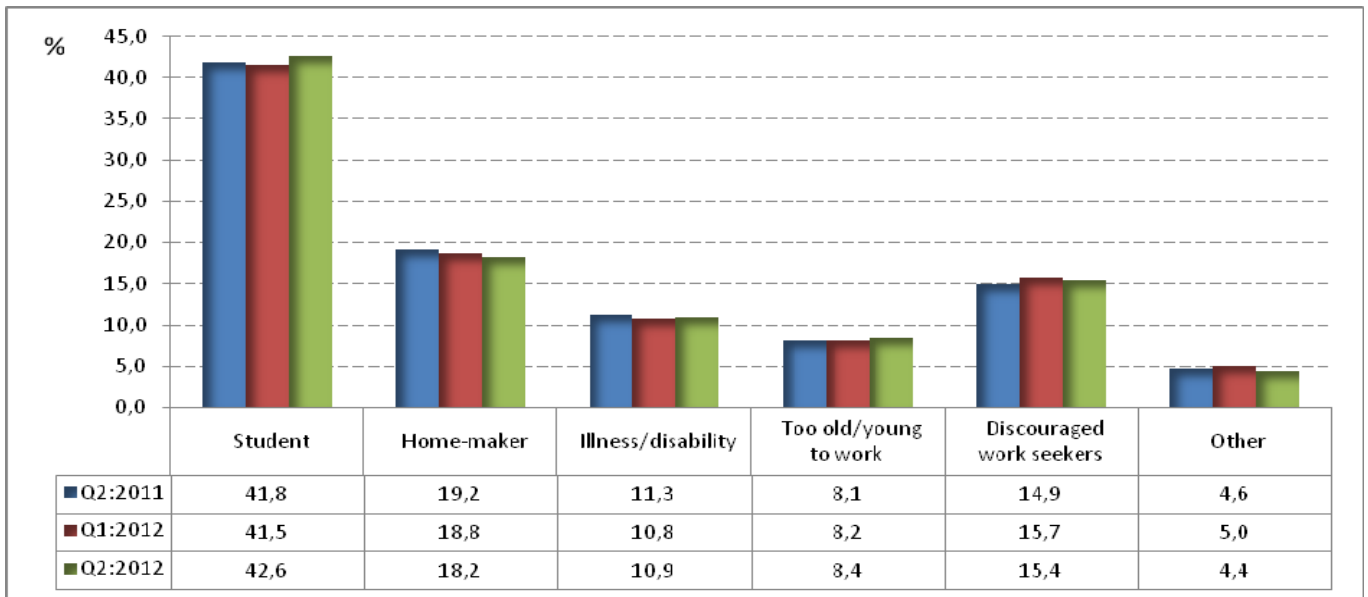

Between Q1:2012 and Q2:2012, the unemployment rate decreased by 0,4 of a percentage point amongst the black African and white population, while it increased amongst the Indian/Asian (0,2 of a percentage point) and coloured (0,1 of a percentage point) population groups.

The year-on-year comparisons show a decrease in the unemployment rate among the black African and Indian/Asian population groups while it increased among the coloured and white population groups.

5. Characteristics of the not economically active population

Figure 19: The not economically active

In Q2:2012, students (42,6%) accounted for the largest share of the not economically active population, followed by home-makers (18,2%), while discouraged work-seekers accounted for 15,4% of the not economically active (0,3 of a percentage point lower than in the previous quarter).

Compared to a year ago (Q2:2011), the share of students among the not economically active population increased by 0,8 of a percentage point; while the share of discouraged work-seekers increased by 0,5 of a percentage point.

PJ Lehohla
Statistician-General: Statistics South Africa

6. Technical notes

6.1. Response details

Table F: Response rates by province

Province	Apr–Jun 2012
	Per cent
Western Cape	86,4
Eastern Cape	99,2
Northern Cape	89,0
Free State	96,9
KwaZulu-Natal	97,6
North West	93,4
Gauteng	82,9
Mpumalanga	93,3
Limpopo	99,4
South Africa	92,6

6.2. Survey requirements and design

The Quarterly Labour Force Survey (QLFS) frame has been developed as a general-purpose household survey frame that can be used by all other household surveys irrespective of the sample size requirement of the survey. The sample size for the QLFS is roughly 30 000 dwellings per quarter.

The sample is based on information collected during the 2001 Population Census conducted by Stats SA. In preparation for the 2001 Census, the country was divided into 80 787 enumeration areas (EAs). Stats SA's household-based surveys use a master sample of primary sampling units (PSUs) which comprise EAs that are drawn from across the country.

The sample is designed to be representative at provincial level and within provinces at metro/non-metro level. Within the metros, the sample is further distributed by geography type. The four geography types are: urban formal, urban informal, farms and tribal. This implies, for example, that within a metropolitan area the sample is representative at the different geography types that may exist within that metro.

The current sample size is 3 080 PSUs. It is divided equally into four subgroups or panels called rotation groups. The rotation groups are designed in such a way that each of these groups has the same distribution pattern as that which is observed in the whole sample. They are numbered from one to four and these numbers also correspond to the quarters of the year in which the sample will be rotated for the particular group.

The sample for the redesigned Labour Force Survey (i.e. the QLFS) is based on a stratified two-stage design with probability proportional to size (PPS) sampling of PSUs in the first stage, and sampling of dwelling units (DUs) with systematic sampling in the second stage.

6.3. Sample rotation

Each quarter, a ¼ of the sampled dwellings rotate out of the sample and are replaced by new dwellings from the same PSU or the next PSU on the list. Thus, sampled dwellings will remain in the sample for four consecutive quarters. It should be noted that the sampling unit is the dwelling, and the unit of observation is the household. Therefore, if a household moves out of a dwelling after being in the sample for, say two quarters, and a new household moves in, the new household will be enumerated for the next two quarters. If no household moves into the sampled dwelling, the dwelling will be classified as vacant (unoccupied).

6.4. Weighting

The sampling weights for the data collected from the sampled households are constructed in such a manner that the responses could be properly expanded to represent the entire civilian population of South Africa. The weights are the result of calculations involving several factors, including original selection probabilities, adjustment for non-response, and benchmarking to known population estimates from the Demographic division of Stats SA.

6.5. Non-response adjustment

In general, imputation is used for item non-response (i.e. blanks within the questionnaire) and edits failure (i.e. invalid or inconsistent responses). The eligible households in the sampled dwellings can be divided into two response categories: respondents and non-respondents; and weight adjustment is applied to account for the non-respondent households (e.g. refusal, no contact, etc.).

6.6. Final survey weights

The final survey weights are constructed using regression estimation to calibrate to the known population counts at the national level population estimates (which are supplied by the Demography division) cross-classified by 5-year age groups, gender and race, and provincial population estimates by broad age groups. The 5-year age groups are: 0–4, 5–9, 10–14, etc., and 65 years and above. The provincial level age groups are: 0–14, 15–34, 35–64, and 65 years and over. The calibrated weights are constructed such that all persons in a household would have the same final weight.

6.7. Estimation

The final survey weights are used to obtain the estimates for various domains of interest, e.g. number of persons employed in agriculture in Western Cape, number of females employed in manufacturing, etc.

6.8. Reliability of the survey estimates

Since estimates are based on sample data, they differ from figures that would have been obtained from complete enumeration of the population using the same instrument. Results are subject to both sampling and non-sampling errors. Non-sampling errors include biases from inaccurate reporting, processing, and tabulation, etc., as well as errors from non-response and incomplete reporting. These types of errors cannot be measured readily. However, to some extent, non-sampling errors can be minimised through the procedures used for data collection, editing, quality control, and non-response adjustment. The variances of the survey estimates are used to measure sampling errors. The variance estimation methodology is discussed below.

(i) Variance estimation

The most commonly used methods for estimating variances of survey estimates from complex surveys such as the QLFS, are the Taylor-series Linearization, Jackknife Replication, Balanced Repeated Replication (BRR), and Bootstrap methods (Wolter, 2007)¹. The Fay's BRR method has been used for variance estimation in the QLFS because of its simplicity.

(ii) Coefficient of variation

It is more useful in many situations to assess the size of the standard error relative to the magnitude of the characteristic being measured (the standard error is defined as the square root of the variance). The **coefficient of variation** (cv) provides such a measure. It is the **ratio of the standard error of the survey estimate to the value of the estimate itself expressed as a percentage**. It is very useful in comparing the precision of several different survey estimates, where their sizes or scale differ from one another.

(iii) P-value of an estimate of change

The p-value corresponding to an estimate of change is the probability of observing a value larger than the particular observed value under the hypothesis that there is no real change. If p-value < 0,01, the difference is highly significant; if p-value is between 0,01 and 0,05, the difference is significant; and if p-value > 0,05, the difference is not significant.

7. Definitions

Discouraged work-seeker is a person who was not employed during the reference period, wanted to work, was available to work/start a business but did not take active steps to find work during the last four weeks, provided that the main reason given for not seeking work was any of the following: no jobs available in the area; unable to find work requiring his/her skills; lost hope of finding any kind of work.

Economic activities are those that contribute to the production of goods and services in the country. There are two types of economic activities, namely: (1) Market production activities (work done for others and usually associated with pay or profit); and (2) Non-market production activities (work done for the benefit of the household, e.g. subsistence farming).

Employed persons are those aged 15–64 years who, during the reference week: did any work for at least one hour; or had a job or business but were not at work (temporarily absent).

Employment-to-population ratio (labour absorption rate) is the proportion of the working-age population that is employed.

Informal employment identifies persons who are in precarious employment situations irrespective of whether or not the entity for which they work is in the formal or informal sector. Persons in informal employment therefore consist of all persons in the informal sector; employees in the formal sector; and persons working in private households who are not entitled to basic benefits such as pension or medical aid contributions from their employer, and who do not have a written contract of employment.

Informal sector: The informal sector has the following two components:

- i) Employees working in establishments that employ less than five employees, who do not deduct income tax from their salaries/wages; and
- ii) Employers, own-account workers and persons helping unpaid in their household business who are not registered for either income tax or value-added tax.

The **labour force** comprises all persons who are employed plus all persons who are unemployed.

Labour force participation rate is the proportion of the working-age population that is either employed or unemployed.

Long-term unemployment: Persons in long-term unemployment are those individuals among the unemployed who were without work and trying to find a job or start a business for one year or more.

Not economically active: Persons aged 15–64 years who are neither employed nor unemployed in the reference week.

Persons in **underemployment (time-related)** are employed persons who were willing and available to work additional hours, whose total number of hours actually worked during the reference period was below 35 hours per week.

Unemployed persons are those (aged 15–64 years) who:

- a) Were not employed in the reference week **and**;
- b) Actively looked for work or tried to start a business in the four weeks preceding the survey interview **and**;
- c) Were available for work, i.e. would have been able to start work or a business in the reference week **or**;
- d) Had not actively looked for work in the past four weeks but had a job or business to start at a definite date in the future and were available.

Unemployment rate is the proportion of the labour force that is unemployed.

The **working-age population** comprises all persons aged 15–64 years
